

The Telecom Group

Nova Group's Telecom Services Group helps telecommunications companies navigate regulatory requirements and adds value for owners and investors through in-building connectivity services.

Telecom Services

Nova's Telecom Group provides environmental and regulatory oversight of infrastructure development projects for telecommunication clients. Whether it is a cellular tower, building antenna, pole attachment, or other development, the Telecom Group uses its decades of experience to research and advise clients on complex regulatory and environmental requirements.

Our professionals have conducted thousands of antenna site reviews, including Environmental Site Assessments (ESAs), National Environmental Policy Act (NEPA), Section 106, and SEQRA assessments.

Nova's network of Environmental Professionals is well versed in the investigation of sites proposed for wireless installations. Whether it's a new tower requiring an ASTM-Phase I ESA to determine past use and risk of contamination, to a Limited Site Investigation to determine if the asbestos lead or other hazardous materials are present, Nova's team of veterans works with clients to assure that the proper due diligence is done prior to engaging in site construction.

The Nova Telecom Group has considerable country-wide reach in consulting with many of the country's tribal communities, State Historic Preservation Offices (SHPOs), and environmental permitting offices, as well as many of the U.S. Fish and Wildlife field offices. The Telecom Group also has extensive knowledge in the permitting requirements for telecommunication projects of all sizes and providing the Client with the best approach for completing projects in a timely manner.

Nova helps the Client navigate the many different procedures, including COVID-related issues, and timelines for tribal and USFWS agencies. We are well versed in finding the best route forward with avoiding adverse impacts to historical resources and threatened and endangered species while still getting our Client's projects completed promptly.

Our Services

- NEPA Screenings and Assessments
- Section 106, Archaeological, and Historic Consultation
- Phase I and II Environmental Site Assessments
- Asbestos and Lead-Based Paint Surveys
- Wetland/Floodplain/Endangered Species Consultations
- FAA/ASR Consultations
- RF and EME/MPE Surveys
- State and Local Regulatory Review
- In-Building Assessment and Consulting
